Summary

MERN full-stack developer who has already shipped a production LLM feature — a live AI assistant serving real visitor questions, not a demo. Independently diagnosed and resolved provider-level integration failures across OpenAI, Groq, and Gemini to land a stable production AI integration, while also delivering JWT-secured REST APIs and full-stack features end-to-end from schema to deployment. Looking to bring that same build-it-to-production instinct to Amantra's agentic AI platform.

Education

Rajiv Gandhi University, Bhopal

Masters of Computer Applications

2020 – 2022

CGPA: 8.85/10

Barkatullah University, Bhopal

Bachelor of Computer Applications

2018 – 2020

CGPA: 6.85/10

Work Experience

Full Stack Developer | *Rittz Digital, Chennai (Remote)*

Feb 2025– Apr 2026

- Shipped production frontend features (React, Next.js, Tailwind CSS) for internal business dashboards used by non-technical teams day to day.
- Built GSAP-driven animations and UI components that turned static dashboard views into interactive ones, directly improving daily usability for internal users.
- Designed and implemented the entire authentication layer from scratch — JWT sessions, bcrypt password hashing, and authorization middleware — locking down every REST endpoint against unauthorized access.

MERN Developer Intern | *Cuvette tech, Bangalore (Remote)*

Feb 2024 – Oct 2024

- Shipped multiple full-stack web applications end-to-end (React, Express.js, MongoDB) across an 8-month certification program, owning each app from schema design through deployment.
- Designed REST APIs and MongoDB schemas that supported multi-user application features, not just single-user CRUD.

Projects

Streamify  —  | *MERN Stack Real-Time Communication Platform*

- Built a full-stack real-time communication platform using React, Node.js, Express.js, MongoDB, Socket.IO, and Tailwind CSS with secure JWT-based authentication and protected routes.
- Implemented one-to-one real-time messaging with instant message delivery, online/offline presence, typing indicators, and persistent chat history using Socket.IO.
- Integrated WebRTC-powered video calling, responsive chat UI, media controls, and optimized state management to deliver a smooth cross-device user experience.

InterviewIQ.AI  —  | *Full-Stack AI Interview Preparation Platform*

- Built a production-ready AI mock interview platform using React, Node.js, Express.js, MongoDB, and Tailwind CSS with secure Firebase Authentication (Google Sign-In) and role-based user management.
- Integrated the OpenRouter API to generate dynamic, role-specific technical interview questions and AI-powered interview evaluations with personalized feedback and interview history.
- Implemented Razorpay payment gateway for premium subscriptions, enabling secure online payments, credit management, and premium feature access within the platform.

Story App  | *Real-time story creation and sharing platform*

- Built and shipped a full-stack MERN platform for multi-user story creation, with JWT authentication and Formik-based form validation end-to-end.
- Implemented input validation and error handling across the full frontend-backend boundary, with persistent structured data in MongoDB supporting concurrent multi-user content.

Skills

Languages: JavaScript, TypeScript, HTML5, CSS3

Frontend: React.js, Next.js, Redux Toolkit, Tailwind CSS, GSAP

Backend: Node.js, Express.js, MongoDB, SQL, REST APIs, JWT

AI / LLM: Groq API, OpenAI API, Prompt Engineering, LLM-Powered Chat Interfaces, AI Chatbot Development — shipped in production, not just studied

Developer Tools: Git, GitHub, VS Code, Cursor, Vercel, Postman, Figma
